

Hope you're well and staying safe

We know that all businesses large or small are undoubtedly affected by the unchartered times we find ourselves in due to the Covid-19 outbreak.

The change in how companies run their day to day business has shown how important it is to have a business continuity strategy in place allowing smooth transition to home working if required in situations such as the one we are facing now, this is why we want to help in ensuring you have the best connectivity.

Fibre 1 are pleased to announce that we can now provide a VoIP telephony solution

that can now fully integrate with Microsoft Teams, allowing you to and instantly have remote working enabled for your users with your current VoIP system.

Teams Integration will allow your users to make and receive calls wherever they are with the added collaboration benefits of:

- File Sharing
- Screen Sharing
- Video Calling
- Instant Chat

No extra software or hardware is required to get you up and running on teams and includes your existing bundled minutes. Just an additional licence to enable Teams integration which compliments your VoIP phones to provide users a physical desk phone whilst in the office and Teams for calls when out of office.

Home Services

During this hard time staff may also find that their home connection is not up to the task of remote working, some carriers have also been restricting their networks in an effort to give a better experience for all. We do primarily deal with Business connections however we would happily look at reviewing any home connections to see if we can improve the connection at all making working from home a better experience for all.

Interested?

Get in touch if you are interested in a no obligation cost review for your business or your interest is peaked in VoIP / Microsoft Teams integration.

We are more than happy to assist in delivering savings and improved working facilities.
